

TECHNICAL DATA SHEET

ND Sedum Cuttings

ND Sedum Cuttings

The ND Sedum Cuttings were grown in our own nursery. The cuttings are hardened off, are of high quality and consist of a mix of at least 5 different types of Sedum. During the growing season (approx. May to November) the mix can even consist of considerably more species. Depending on the amount applied (recommended in the FLL Guideline (2018 edition): 60-100 grams per square meter) and the weather conditions, closed vegetation will develop over the course of a few months to 2 years.

Application

The ND Sedum Cuttings are a component of the Nophadrain Extensive Green Roof Systems. In addition to extensive roof vegetation, ND Sedum Cuttings are also extremely suitable for use on grass tiles, edges/middle strips of motorways and tram tracks/train tracks, vegetation on graves and embankments.

Properties

- Sedum species: at least 5
- Recommended amount: 60- 100 g/m²

Species

- Sedum album "Coral Carpet"
- Sedum album "Murale"
- Sedum album "Minor"
- Sedum hispanicum "Glaucum"
- Sedum hybr. "Immergrünchen"
- Sedum kamschaticum
- Sedum kamschaticum "Variegatum"
- Sedum floriferum "Weihenstephaner Gold"
- Sedum sexangulare
- Sedum "Angelina"
- Sedum reflexum
- Sedum spurium "Album"
- Sedum spurium "Red Carpet"
- Sedum spurium "John Creech"

Product	Length	Packaging
ND Sedum Cuttings	approx. 20- 40 mm	from approx. 1 kg, bag
